ATTACHMENT 2

Other trunk groups for operator services, directory assistance, emergency services and intercept may be established if required. The LERG should be referenced for current routing and tandem serving arrangements. The Supergroup Architecture is illustrated in Exhibit E.

2.6   Cbeyond may establish interconnection at BellSouth end offices for the delivery of Cbeyond originated local and intraLATA toll traffic destined for BellSouth end-users served by that end-office.

2.6.1   When end office trunking is ordered by BellSouth to deliver BellSouth originated traffic to Cbeyond, BellSouth will provide overflow routing through BellSouth tandems consistent with how BellSouth overflows its traffic. The overflow will be based on the homing arrangements Cbeyond displays in the LERG. Likewise, if Cbeyond interconnects to a BellSouth end office for delivery of Cbeyond originated traffic, Cbeyond will overflow the traffic through the BellSouth tandems based on the BellSouth homing arrangements shown in the LERG.

2.6.2   The Parties shall utilize direct end office trunking under the following conditions:

(1) Tandem Exhaust - If a tandem through which the Parties are interconnected is unable to, or is forecasted to be unable to support additional traffic loads for any period of time, the Parties will mutually agree on an end office trunking plan or an alternative routing plan that will alleviate the tandem capacity shortage and ensure completion of traffic between Cbeyond and BellSouth's subscribers.

(2) Traffic Volume –To the extent either Party has the capability to measure the amount of traffic between a Cbeyond switching center and a BellSouth end office, that Party shall install and retain direct end office trunking sufficient to handle actual or reasonably forecasted traffic volumes, whichever is greater, between a Cbeyond switching center and a BellSouth end office where the traffic exceeds or is forecasted to exceed two DS1s of local traffic per month. Either Party will install additional capacity between such points when overflow traffic between
Cbeyond's switching center and BellSouth's end office exceeds or is forecasted to exceed two DS1s of local traffic per month. In the case of one way trunking from Cbeyond, additional trunking shall be required when its traffic volume has achieved the preceding threshold. Additionally, in the case of one-way trunks from BellSouth, additional trunking may be requested by either party when its traffic volume has achieved a single DS1 of local traffic per month.

(3) Mutual Agreement - The Parties may install direct end office trunking upon mutual agreement in the absence of the conditions (1) or (2) above.

BellSouth /Cbeyond
Interconnection Agr

200,000 MOU per month criteria set forth above). The Verizon Tandem office shall be designated as both a Verizon-IP and a Focal–IP; provided, however, that each Party shall be responsible for fifty percent (50%) of the two-way Tandem Interconnection facilities. Focal shall be entitled to use multiple facilities providers at Verizon Tandem offices. BA tandem interconnection facilities shall terminate at a BA-provided fiber-optic terminal located at Focal's switch facility, if Focal's switch facility is located in the relevant LATA. In instances where Focal's switch facility is not located in the relevant LATA, BA's tandem interconnection facilities shall terminate at a mutually agreed upon IP located within the LATA.

(c)   If the Parties are unable to identify a suitable alternative IP, as set forth in subsection (a) above, the matter can be taken to dispute resolution.

4.2.4 The Parties shall configure separate one-way Traffic Exchange Trunks for traffic from Focal to Verizon, and for traffic from Verizon to Focal, respectively; provided, however, that in lieu thereof, upon receipt of Focal's written request, Verizon shall provide Focal two-way Traffic Exchange Trunks pursuant to the terms and conditions set forth below:

(a)   Prior to requesting two-way Traffic Exchange Trunks from Verizon, Focal shall meet with Verizon to conduct a joint planning meeting. At that joint planning meeting, each Party shall provide to the other Party originating CCS information, and the Parties shall agree on the appropriate initial number of two-way End Office and Tandem Traffic Exchange Trunks and the interface specifications at the Point of Interconnection.

(b)   The Parties shall meet (telephonically or in person) from time to time, as needed, to review data on End Office and Tandem two-way Traffic Exchange Trunks to determine the need for new trunk groups and to plan any necessary changes in the provisioning of two-way Traffic Exchange Trunks.

(c)   On a semi-annual basis, Focal shall submit a good faith forecast to Verizon of the number of End Office and Tandem two-way Traffic Exchange Trunks that Focal anticipates that it will require from Verizon during the ensuing two (2) year period. Such trunk forecasts shall conform to the Verizon CLEC trunk forecasting guidelines as in effect from time to time.

(d)   Two-Way Traffic Exchange Trunks shall have SS7 Common Channel Signaling with B8ZS and Extended Super Frame (ESF), where available.

(e)   With respect to End Office two-way Traffic Exchange Trunks, both Parties shall use an economic CCS equal to five (5).

(f)   In the event the traffic volume between any two (2) End Office switches at any time exceeds the CCS busy hour equivalent of one (1) DS-1 based on an industry standard study period, Focal shall promptly submit an ASR to Verizon to establish new End Office two-way Traffic Exchange Trunks to the applicable End Office(s). In the event that appropriate data is not available to make such a determination, the Parties shall use a threshold of 200,000 combined minutes of use for a single month as a trigger.

have knowledge of the offered and overflow load at each end of the two-way trunk group, and thereby enable accurate and independent determination of performance levels and trunk requirements. The parties agree to the electronic exchange of data.

3.5 The Parties recognize that embedded one-way trunks may exist for Local/IntraLATA toll traffic via end-point meet Interconnection architecture. The parties agree to negotiate a transition plan to migrate the embedded one-way trunks to two-way trunks via any Interconnection method as described in Appendix NIM. The Parties will coordinate any such migration, trunk group prioritization, and implementation schedule. **SBC-13STATE** agrees to develop a cutover plan and project manage the cutovers with CLEC participation and agreement.

4. TANDEM TRUNKING AND DIRECT END OFFICE TRUNKING

4.1 **SBC-13STATE** deploys in its network Tandems that switch local only traffic (local Tandem **SBC-SWBT** only), Tandems that switch IntraLATA and InterLATA traffic (Access Tandem) and Tandems that switch both local and IntraLATA/InterLATA traffic (local/Access Tandem). In addition **SBC-13STATE** deploys Tandems that switch ancillary traffic such as 911 (911 Tandem), Operator Services/ Directory Assistance (OPS/DA Tandem), and mass calling (choke Tandem). Traffic on Tandem trunks does not terminate at the Tandem but is switched to other trunks that terminate the traffic in End Offices and ultimately to End Users.

4.2 When Tandem trunks are deployed, CLEC shall route appropriate traffic (i.e. only traffic to End Offices that subtend that Tandem) to the respective **SBC-13STATE** Tandems on the trunk groups defined below. **SBC-13STATE** shall route appropriate traffic to CLEC switches on the trunk groups defined below.

4.2.1 When transit traffic through the **SBC-13STATE** Tandem from CLEC to another Local Exchange Carrier, CLEC or wireless carrier requires 24 or more trunks, CLEC shall establish a direct End Office trunk group between itself and the other Local Exchange Carrier, CLEC or wireless carrier CLEC shall route Transit Traffic via **SBC-13STATE**'s Tandem switches, and not at or through any **SBC-13STATE** End Offices. This trunk group will be serviced in accordance with the Trunk Design Blocking Criteria in Section 7.0.

4.3 While the Parties agree that it is the responsibility of the CLEC to enter into arrangements with each third party carrier (ILECs or other CLECs) to deliver or receive transit traffic, **SBC-13STATE** acknowledges that such arrangements may not currently be in place and an interim arrangement will facilitate traffic

completion on an interim basis. Accordingly, until the earlier of (i) the date on which either Party has entered into an arrangement with third-party carrier to exchange transit traffic to CLEC and (ii) the date transit traffic volumes exchanged by the CLEC and third-party carrier exceed the volumes specified in Section 4.2.1, **SBC-13STATE** will provide CLEC with transit service. CLEC agrees to use reasonable efforts to enter into agreements with third-party carriers as soon as possible after the Effective Date.

4.4 Direct End Office trunks terminate traffic from a CLEC switch to an **SBC-13STATE** End Office and are not switched at a Tandem location. The Parties shall establish a two-way direct End Office trunk group when End Office traffic requires twenty-four (24) or more trunks or when no local or local/Access Tandem is present in the local exchange area. Overflow from either end of the direct End Office trunk group will be alternate routed to the appropriate Tandem.

4.5 All traffic received by **SBC-13STATE** on the direct End Office trunk group from CLEC must terminate in the End Office, i.e. no Tandem switching will be performed in the End Office. Where End Office functionality is provided in a remote End Office of a host/remote configuration, the Interconnection for that remote End Office is only available at the host switch. The number of digits to be received by the **SBC-13STATE** End Office shall be mutually agreed upon by the Parties. This trunk group shall be two-way.

4.6 Trunk Configuration

4.6.1 Trunk Configuration – **SBC-SWBT**, **SBC-AMERITECH** and **SNET**

4.6.1.1 Where available and upon the request of the other Party, each Party shall cooperate to ensure that its trunk groups are configured utilizing the B8ZS ESF protocol for 64 kbps Clear Channel Capability (64CCC) transmission to allow for ISDN interoperability between the Parties' respective networks. Trunk groups configured for 64CCC and carrying Circuit Switched Data (CSD) ISDN calls shall carry the appropriate Trunk Type Modifier in the CLCI-Message code. Trunk groups configured for 64CCC and not used to carry CSD ISDN calls shall carry a different appropriate Trunk Type Modifier in the CLCI-Message code.

4.6.2 Trunk Configuration – **PACIFIC** and **NEVADA**

4.6.2.1 When Interconnecting at **PACIFIC/NEVADA**'s digital End Offices, the Parties have a preference for use of Bipolar 8 Zero Substitution Extended Super Frame (B8ZS ESF) two-way trunks
